# 1 Introduction

## 1.1 Background

Eco Logical Australia (ELA) was commissioned by ACTEW Corporation (ACTEW) to deliver terrestrial ecological services as required by the environmental approval process for the Murrumbidgee to Googong Water Transfer Project (M2G). A component of that service is to provide post-construction rehabilitation monitoring in accordance with the Landscape Rehabilitation Management Plan (LRMP) for the M2G project, which has been undertaken by Blue Gum Ecological Consulting on behalf of ELA.

The following report contains the results of the autumn 2014 monitoring study for rehabilitation planting<sup>1</sup> within the construction corridor and structure sites. This is the fourth in a series of bi-annual reports to document the progress of tree, shrub and herbaceous plantings.

## 1.2 Study area

The study area extended from the Low Lift Pump Station (LLPS) at Angle Crossing on the Murrumbidgee River to the discharge facility at Burra Creek, near the intersection of Williamsdale and Burra Roads. The pipeline construction corridor has a total length of about 12 km (**Figures 1-3, Appendix 1**).

The study area falls within the Williamsdale (8726-4N) 1:25,000 Map Sheet and is part of the South-east Highlands Bioregion (Commonwealth of Australia 2012).

## 1.3 Study aims

The aim of the study was to monitor representative sub-sets of tree, shrub and herbaceous plantings within the M2G construction corridor and record their development and success rates.

## 1.4 Planting regime

Approximately 5,000 tree and shrub seedlings (Hiko Cells, 45Lt and 300SR containers) and 136,000 herbaceous tube-stock (Viro Cells) were planted within the M2G construction corridor and structure sites during spring 2011 and autumn 2012. Native plantings comprised nine tree species; eleven shrub species; eight grass species; five forb species; and six sedge/rush species, placed in approximately 280 planting arrays. In addition, five non-native tree and shrub species were also planted in the eastern sections of the construction corridor at the request of landowners. An inventory of planted species and the approximate number of individuals in each category are provided in **Table 1**.

Species selected for planting, as well as their distribution, were guided by former vegetation type, spatial characteristics of the vegetation and total vegetation loss resulting from construction activity. Additional woody plantings were included as part compensatory measure for habitat loss as well as for amenity.

---

<sup>1</sup> Concurrent plot-based sampling is being undertaken to monitor seeding rehabilitation within the construction corridor and is presented in a separate report.

Groundcover rehabilitation involved a multi-phased approach, which included: the reinstatement of top-soil; initial seeding of native species and direct drilling of a sterile non-native cover crop (the seeding component is monitored and reported separately); and a subsequent planting program (as defined above), which involved the placement of herbaceous tube-stock over approximately 30,000m<sup>2</sup> (3 ha) at an average rate of about 4.5 plantings per 1m<sup>2</sup>.

## 2 Methods

### 2.1 Monitoring regime

Permanent planting sites were established within the M2G construction corridor and structure sites and will be monitored on a bi-annual basis (autumn and spring/summer periods) over a period of at least two-years post-construction.

The current monitoring period was conducted on between 2 and 8 April 2014.

### 2.2 Selection of monitoring sites

Twenty-five monitoring (sample) sites were selected from approximately 280 planting arrays (which comprised 200 herbaceous<sup>2</sup> arrays and 80 tree and shrub arrays) within the M2G construction corridor and structure sites (**Figures 1 – 3, Appendix 1**). Twelve monitoring sites were established in the ACT and thirteen in NSW sections (**Table 2**).

Two planting categories are referred to in this report, they are: *woody plantings* (trees and shrubs - coded TSP); and *herbaceous plantings* (which include grasses, forbs, sedges and rushes - coded HP). Woody plantings were monitored at twelve sample sites, and herbaceous plantings at thirteen sample sites.

The spatial arrangement of sampling sites was influenced by the placement of planting arrays (which in turn were influenced by the former distribution of native vegetation) and as such fewer sampling sites appear in the eastern non-native section of the corridor than in the central and western sections. Sites were selected to include variations in landform, such as: slope and aspect, soil moisture and former vegetation type.

Each sample site was marked with a red-tipped stake, at which grid co-ordinates (using a hand-held Garmin GPS 60 set to WGS 84) and a photograph were taken.

**Table 2: Planting monitoring sites within the construction corridor. Each site has a unique identifier (TSP = tree & shrub planting and HP = herbaceous planting) and are sorted in order of chainage from the LLPS.**

Site sequence*	Site ID <sup>^</sup>	Approx. chainage from LLPS	Co-ordinates	Jurisdiction	Property
1	TSP1	250	691345 - 6060236	ACT	PCS (Murrumbidgee R. corridor)
2	HP1	750	691706 - 6060396	ACT	PCS (Murrumbidgee R. corridor)
3	TSP2	1,025	691964 - 6060519	ACT	PCS (Murrumbidgee R. corridor)

16	HP9	4,050	694890 - 6060767	NSW	McDonald
17	HP10	4,475	695248 - 6060569	NSW	McDonald
18	TSP8	4,975	695663 - 6060392	NSW	Loneragan
19	TSP9	5,475	696175 - 6060305	NSW	Loneragan
20	HP11	6,175	696826 - 6060127	NSW	Codd / Howarth
21	TSP10	6,425	697084 - 6060204	NSW	Johanson
22	HP12	7,550	698003 - 6060755	NSW	Devitt
23	HP13	8,250	698541 - 6061210	NSW	Bos (drainage channel)
24	TSP11	9,300	699277 - 6061925	NSW	Latimer
25	TSP12	11,900	701346 - 6063099	NSW	Discharge facility

\*Sites are listed according to their sequence from the LLPS to Discharge Facility, as shown in Figures 1-3 in Appendix 1.

## 2.3 Survey techniques

Sampling of planted specimens was conducted by either direct count or estimates of cover abundance. Recording was more complicated for herbaceous plantings than for tree and shrub plantings for the following reasons:

- Increases in species frequency and diversity, since the commencement of monitoring, has resulted in less confident discrimination between planted herbaceous species and 'background' recruitment - from either seeding or natural germination – of the same species.
- Limited information on exact planting frequency at each sample site.

Consequently, different monitoring strategies were adopted for each planting category, and are discussed in the following sections.

### 2.3.1 Tree and shrub planting

A simple quantitative sampling method was used to measure tree and shrub planting success. Specimens were counted, identified to at least genus level and their health determined according to the following criteria:

- *Good Health* - indicated by vigorous growth, fully leaved with expected colouration for that species;
- *Poor Health* - stems or leaves discoloured, foliage limited or easily dislodged, specimen may appear stunted or heavily browsed;

- *Dead* - absence of leaves, stem or leaves entirely discoloured or desiccated with no visible living vegetative material.

### **2.3.2 Herbaceous (grasses and forbs) planting**

As indicated in Section 2.3, above, isolating planted herbaceous specimens from non-planted specimens of the same species proved difficult and time consuming, and it was not possible to account for herbaceous plantings in the same manner as for trees and shrubs. Consequently, a semi-quantitative approach, based on cover abundance estimates of target herbaceous species (accepting unavoidable mixing of planted and non-planted forms of the same species) was adopted to gauge planting performance.

All native herbaceous species (both planted and non-planted) were recorded and their cover abundances estimated according to a modified Braun-Blanquet scale, although the size and shape of sample sites were neither uniform nor standardised and ranged from about 40 m<sup>2</sup> to 400 m<sup>2</sup> in size (sample sites conformed to the original size and configuration of planting arrays). While this limited the capacity to compare results between sample sites (as in the manner of a standardised plot-based study) the sampling method is considered representative of both planted tube stock and planting sites.

## 3 Results

### 3.1 Overview

Monitoring results for tree and shrub planting are summarised in **Section 3.2** and for herbaceous planting in **Section 3.3**.

Monitoring surveys accounted for approximately 14% of all woody plantings and between 3.6% and 7.2%<sup>3</sup> of all herbaceous plantings, or, measured as a proportion of planting area, about 6.5% (1,950 m<sup>2</sup>) of the total planting area (30,000 m<sup>2</sup>). As explained, in **Section 2.3** above, accounting for each herbaceous planting cell proved problematic and a modified sampling approach, based on cover abundance measures, was adopted.

Main findings from the current monitoring study are:

- **significant decline** in tree and shrub planting success with a corresponding **increase** in dead or missing plantings;
- **a small decline** in the total number of native herbaceous species (attributed in part to seasonal growth patterns); and,
- **a small increase** in the estimated cover abundance of 'planted' native herbaceous species.

### 3.2 Tree and shrub monitoring

A total of 700<sup>4</sup> tree and shrub plantings were monitored at twelve sample sites during the current monitoring period (see **Table 7 in Appendix 2** for full data sets). Of these, 343 (49%) were in good health, 82 (11.7%) in poor health and 275 (39.3%) either dead or unaccounted (**Table 3**). This represented a 15% decline of specimens in good health compared to the previous spring 2013 sampling period (**Table 4**). Furthermore, declines in specimen health were observed at nine of the twelve sample sites.

The best performing sample sites (TSP8 and TSP11) had 88.9% and 90.9% of specimens in good health, respectively, however, these sites had the lowest sample sizes. Five sites had less than 75% specimens in good health and five sites below 50% (**Table 3**). Slightly more than half of the total sample was classified as poor, dead or missing (**Chart 1**). **Table 3** provides a summary of the current tree and shrub survey results, and **Table 4** compares the results from previous sampling sessions.

The current tree and shrub planting results were the least successful of any period (**Chart 2**).

Extrapolating the proportional sample results (**Table 3**) to the total planted tree and shrub population of 4,843 (see **Table 1 in Section 1**) would yield approximately 2,375 plantings in good health, 565 in poor health and 1,900 dead or unaccounted. Assuming a sample error of +/- 5%, the number of plantings in good health would range from 2,257 to 2,493.

---

<sup>3</sup> This is based on an estimated planting regime of between 2.5 to 5 plantings per m<sup>2</sup>

<sup>4</sup> The initial TSP sample size was 661 in spring 2012, increasing to 700 in spring 2013.

## 3.2.2 Monitoring site TSP2 (3)

<b>Jurisdiction</b>	<b>ACT</b>	<b>TSP2</b> is located within the Murrumbidgee River Corridor, about 1,025 m from the LLPS.
Co-ordinates	691964 – 6060519	
<b>No. of tree &amp; shrub species</b>	<b>5</b>	<i>Note:</i> Decline of specimens in good health and significant increase in the number of dead or missing specimens.
<b>Seedling health</b>		
Good	<b>80</b> (95)	
Poor	<b>12</b> (14)	
Dead / Missing	<b>35</b> (15)	
<b>Total plantings</b>	<b>127</b> (127)	

Plate 2: Monitoring Site TSP2. Image on left spring 2013 and right autumn 2014.

## 3.2.3 Monitoring site TSP3 (5)

<b>Jurisdiction</b>	<b>ACT</b>	<b>TSP3</b> is located within the Murrumbidgee River Corridor, about 1,350 m from the LLPS.  <i>Note:</i> Significant decline of specimens in good health and increase in the number of dead or missing specimens.
Co-ordinates	691964 – 6060519	
<b>No. of tree &amp; shrub species</b>	<b>3 (4)</b>	
<b>Seedling health</b>		
Good	<b>18 (30)</b>	
Poor	<b>11 (11)</b>	
Dead / Missing	<b>66 (54)</b>	
<b>Total plantings</b>	<b>95 (95)</b>	

**Plate 3: Monitoring Site TSP3. Image on left spring 2013 and right autumn 2014.**

## 3.2.4 Monitoring site TSP4 (7)

<b>Jurisdiction</b>	<b>ACT</b>	<b>TSP4</b> is located about 1,900 m from the LLPS within the ACT.
Co-ordinates	692592 – 6060707	
<b>No. of tree &amp; shrub species</b>	<b>2 (3)</b>	<i>Note:</i> Significant decline of specimens in good health and significant increase in the number of dead or missing specimens.
<b>Seedling health</b>		
Good	<b>7 (28)</b>	
Poor	<b>2 (8)</b>	
Dead / Missing	<b>67 (40)</b>	
<b>Total plantings</b>	<b>76 (76)</b>	

**Plate 4: Monitoring Site TSP4. Image on left spring 2013 and right autumn 2014.**

## 3.2.5 Monitoring site TSP5 (9)

<b>Jurisdiction</b>	<b>ACT</b>	<b>TSP5</b> is located about 2,325 m from the LLPS within the ACT.
Co-ordinates	693226 – 6060578	
<b>No. of tree &amp; shrub species</b>	<b>3</b>	<i>Note:</i> Conyza sp. widespread and abundant.
<b>Seedling health</b>		Decline of specimens in good health and increase in the number of specimens in poor health.
Good	4 (8)	
Poor	3 (1)	
Dead / Missing	11 (10)	
<b>Total plantings</b>	<b>19 (19)</b>	

Plate 5: Monitoring Site TSP5. Image on left spring 2013 and right autumn 2014.

## 3.2.6 Monitoring site TSP6 (11)

<b>Jurisdiction</b>	<b>ACT</b>	<b>TSP6</b> is located about 2,650 m from the LLPS - west of and adjacent to the Monaro Hwy within the ACT.
Co-ordinates	693528 – 6060505	
<b>No. of tree &amp; shrub species</b>	<b>3</b>	<p><i>Note:</i> Decline of specimens in good health and increase in the number of specimens in poor health, dead or missing.</p> <p>Natural recruitment of native Eucalypts – Yellow Box <i>Eucalyptus melliodora</i> and Blakely's Red Gum <i>E. blakelyi</i>. These were not included in the sample.</p>
<b>Seedling health</b>		
Good	7 (13)	
Poor	6 (4)	
Dead / Missing	8 (4)	
<b>Total plantings</b>	<b>21 (21)</b>	

**Plate 6: Monitoring Site TSP6. Image on left spring 2013 and right autumn 2014.**

## 3.2.7 Monitoring site TSP7 (13)

<b>Jurisdiction</b>	<b>NSW</b>	<b>TSP7</b> is located about 3,040 m from the LLPS within the Smith property, NSW. <i>Note:</i> Sample site is separated in to two planting areas - northern and southern sides of the construction corridor. Additional plantings have maintained the success rate at this sample site. Also, natural recruitment of native eucalypts (Apple Box <i>Eucalyptus bridgesiana</i> and Broad-leaved Peppermint <i>E. dives</i> ). A pair of Brown Treecreeper observed within scattered woodland in the south-western corner of the McDonald property.
Co-ordinates	693927 – 6060542	
<b>No. of tree &amp; shrub species</b>	<b>3 (2)</b>	
<b>Seedling health</b>		
Good	<b>16 (14)</b>	
Poor	<b>1 (3)</b>	
Dead / Missing	<b>5 (5)</b>	
<b>Total plantings</b>	<b>22 (22)</b>	

**Plate 7: Monitoring Site TSP7. Image on left spring 2013 and right autumn 2014.**

## 3.2.8 Monitoring site TSP8 (18)

<b>Jurisdiction</b>	<b>NSW</b>	<b>TSP8</b> is located about 4,975 m from the LLPS within the Lonergan property, NSW.
Co-ordinates	695663 – 6060392	
<b>No. of tree &amp; shrub species</b>	<b>2 (3)</b>	<i>Note:</i> Site contains well developed <i>Themeda</i> tussocks.
<b>Seedling health</b>		
Good	<b>8 (6)</b>	
Poor	<b>0 (1)</b>	
Dead / Missing	<b>1 (0)</b>	
<b>Total plantings</b>	<b>9 (9)</b>	

**Plate 8: Monitoring Site TSP8. Image on left spring 2013 and right autumn 2014.**

## 3.2.9 Monitoring site TSP9 (19)

<b>Jurisdiction</b>	<b>NSW</b>	<b>TSP9</b> is located about 5,475 m from the LLPS within the Lonergan property, NSW.
Co-ordinates	696175 – 6060305	
<b>No. of tree &amp; shrub species</b>	<b>3</b>	<i>Note:</i> Decline of specimens in good health and increase in the number of specimens in poor health.
<b>Seedling health</b>		
Good	<b>14</b> (20)	
Poor	<b>9</b> (3)	
Dead / Missing	<b>1</b> (1)	
<b>Total plantings</b>	<b>24</b> (24)	

**Plate 9: Monitoring Site TSP9. Image on left spring 2013 and right autumn 2014.**

## 3.2.10 Monitoring site TSP10 (21)

<b>Jurisdiction</b>	<b>NSW</b>	<b>TSP10</b> is located about 6,425 m from the LLPS within the Johanson property, NSW.
Co-ordinates	697084 – 6060204	
<b>No. of tree &amp; shrub species</b>	<b>6 (8)</b>	<i>Note:</i> Slight decline of specimens in good health and significant increase in the number of specimens either dead or missing.
<b>Seedling health</b>		
Good	<b>94 (107)</b>	
Poor	<b>12 (19)</b>	
Dead / Missing	<b>33 (13)</b>	
<b>Total plantings</b>	<b>139 (139)</b>	

Plate 10: Monitoring Site TSP10. Image on left spring 2013 and right autumn 2014.

## 3.2.11 Monitoring site TSP11 (24)

<b>Jurisdiction</b>	<b>NSW</b>	<b>TSP11</b> is located about 9,300 m from the LLPS within the Latimer property, NSW.
Co-ordinates	699277 – 6061925	
<b>No. of tree &amp; shrub species</b>	<b>2 (3)</b>	<i>Note:</i> Planting success maintained
<b>Seedling health</b>		
Good	<b>10 (10)</b>	
Poor	<b>0 (0)</b>	
Dead / Missing	<b>1 (1)</b>	
<b>Total plantings</b>	<b>11 (11)</b>	

Plate 11: Monitoring Site TSP11. Image on left spring 2013 and right autumn 2014.

**3.2.12 Monitoring site TSP12 (25)**

<b>Jurisdiction</b>	<b>NSW</b>	<b>TSP12</b> is located about 11,900 m from the LLPS near the discharge facility, NSW.
Co-ordinates	701346 – 6063099	
<b>No. of tree &amp; shrub species</b>	<b>3 (4)</b>	<i>Note:</i> Decline of specimens in good health and significant increase in the number of specimens either dead or missing.
<b>Seedling health</b>		
Good	<b>42 (53)</b>	
Poor	<b>5 (3)</b>	
Dead / Missing	<b>18 (9)</b>	
<b>Total plantings</b>	<b>65 (65)</b>	

**Plate 12: Monitoring Site TSP12. Image on left spring 2013 and right autumn 2014.**

### 3.3 Herbaceous species monitoring

A total of 46 native herbaceous species<sup>5</sup> (compared to 57 sp. in spring 2013) were recorded at thirteen sample sites during the current monitoring period. This comprised 12<sup>6</sup> of the 19 *planted* species (see **Table 1**) and 34 *non-planted* species.

Four planted species were recorded at all thirteen sample sites (100% frequency), they are: (Kangaroo Grass *Themeda australis*, Common Wheatgrass *Elymus scaber*, Windmill Grass *Chloris truncata* and Wallaby Grass *Austrodanthonia*. One species (Weeping Grass *Microlaena stipoides*) was recorded at twelve sites (93%), two (Red Grass *Bothriochloa macra* and Speargrass *Austrostipa scabra*) at eleven sites (85%), one (*Wahlenbergia* sp.) at ten sites (76%), and one (Common Everlasting *Chrysocephalum apiculatum*) at seven sites (54%). The remaining three species (Slender Tick-trefoil *Desmodium varians*, *Juncus usitatus* and *Poa Poa labillardierei*) were recorded at fewer than three sites (<23%). For full data set see **Table 8** in **Appendix 3**.

Planted species not recorded at sample sites during the current monitoring period were: Scaly Buttons *Leptorhynchus squamatus*, Blushing Bindweed *Convolvulus erubescens* (though both species were recorded elsewhere within the construction corridor), Spiny-headed Mat-rush *Lomandra longifolia*, Floating Club Rush *Isolepis fluitans*, *Eleocharis acuta*, Tall Sedge *Carex appressa* and Common Reed *Phragmites australis*. The latter four species are associated with damp areas and may be present in other drainage channels that were not sampled.

#### **Species diversity**

Native species diversity ranged from 6 to 10 for planted species and 2 to 14 for non-planted species, at an average of 8.2 sp. and 8.5 sp., respectively, per site (**Table 5**). The combined planted/non-planted average was 16.7 sp. per site, which was slightly lower than in spring 2013 (16.9), but higher than the preceding autumn 2013 (13.2) and spring 2012 (9.8) (**Table 6**).

Despite the variability in the proportions of planted and non-planted at the site level there was general uniformity between the groups across the entire sample (**Chart 3**).

A number of previously recorded warm-season native annual and perennial species were either not observed or occurred at low frequencies, these included: Common Woodruff *Asperula conferta*, Grass Cushion *Isoetopsis graminifolia*, Slender Tick-trefoil *Desmodium varians*, Bulbine Lily *Bulbine bulbosa*, Austral Sunray *Triptilodiscus pygmaeus*, Adder's Tongue *Ophioglossum lusitanicum*, Blue Storksbill *Erodium crinitum*, Spoon Cudweed *Stuartina muelleri* and Early Nancy *Wurmbea dioica*.

---

<sup>5</sup> Exotic species were not included in the sample data.

<sup>6</sup> *Themeda australis*, *Bothriochloa macra*, *Microlaena stipoides*, *Austrodanthonia carphoides*, *Elymus scaber*, *Chloris truncata* and *Austrostipa scabra* comprise planted, seeded and naturally germinated cohorts and it was not possible to differentiate between these forms, in which case, their incidences have been recorded as planted. Similarly, *Wahlenbergia stricta*, *Convolvulus erubescens* and *Desmodium varians* are likely to comprise planted and naturally germinated forms.

Table 5: Summary of herbaceous monitoring results for the autumn 2014 monitoring period.

Site ID	Planted native sp.	Non-planted native sp.	Total native sp.	Est. TFC*	Est. TFC* non-planted
HP1	9	8	17	5-25%	<5%
HP2	9	13	22	5-25%	5-25%
HP3	7	8	15	<5% v	5-25%^

HP11	8	8	16	5-25%	<5%
HP12	7	13	20	5-25%	<5%
HP13	8	2	10	<5%	<5%
<b>Mean sp./site</b>	<b>8.23</b>	<b>8.54</b>	<b>16.77</b>	-	-
<b>Est. TFC*</b>	-	-	-	<b>&lt;25%</b>	<b>5-10%</b>

\* TFC = Total foliage cover;

^ = Increase in TFC from spring 2013;

v = Decrease in TFC from spring 2013.

Table 6: Summary of previous herbaceous monitoring results.

Monitoring Period	Categories	Planted	Non-planted	Total native sp.
<b>Spring 2012</b>				
	Mean sp./site	6.4	3.4	9.8
	Est. TFC*	5-10%	<5%	10-15%
<b>Autumn 2013</b>				
	Mean sp./site	7.5	5.8	13.2
	Est. TFC*	<25%	<5%	25-30%
<b>Spring 2013</b>				
	Mean sp./site	8.4	8.5	16.9
	Est. TFC*	<25%	>5%	20-30%

\*TFC = Total foliage cover

**Chart 3: Proportions of planted (blue) and non-planted (red) native herbaceous species at each monitoring site.**

### Cover abundance estimates

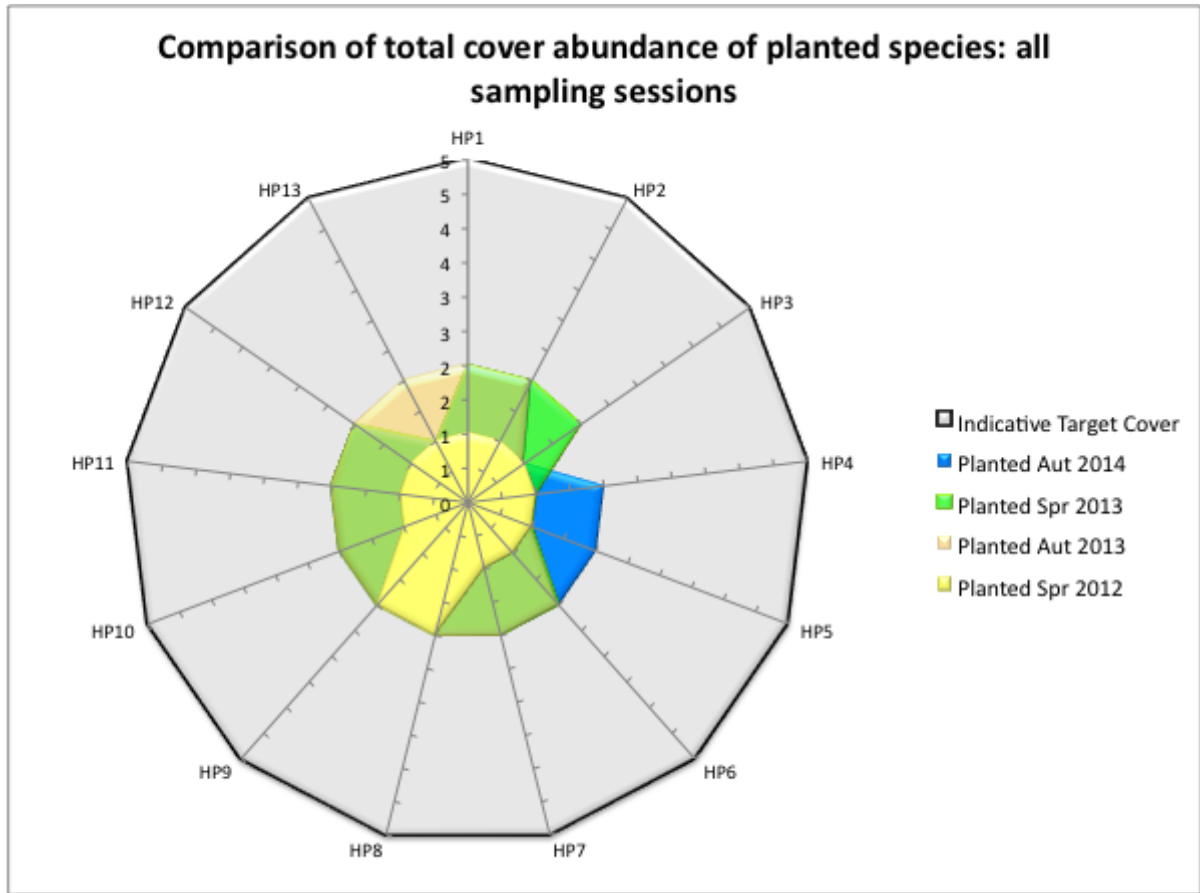

Two planted species obtained individual cover scores of 2 (5-25% cover range): *Chloris truncata* (HP8 and HP12) and *Chrysocephalum apiculatum* (HP2). All other planted herbaceous species had cover scores of 1 (<5% cover and >15 individuals) or less. Importantly, there was an increase in the frequency of individual species with cover scores of 1 at twelve of the thirteen sample sites (**Table 8 in Appendix 3**).

The estimated cover abundance of planted native species increased at HP4 and HP5, declined at HP3 and remained stable at all other sites. Despite a small decline in number of recorded species (see preceding section) there was a slight increase in total cover abundance of planted species (**Tables 5 and 6, above**), due in part to a wider representation and increased frequency of species with cover scores of 1.

Overall, the total cover abundance of planted species remained at the higher end of the 5-25% range. This equated to a predicted maximum foliar cover of planted species of about 7,500m<sup>2</sup> across the 30,000m<sup>2</sup> planted area (see **Chart 4**). Cover abundance estimates for non-planted native species fell in the 5-10% range (**Table 5**).

**Chart 4: Estimated total cover abundance of planted herbaceous species across the sample area, which remains at the higher end of the 5-25% cover range. Cover range is indicated by the vertical column, where: 1 = <5% cover; 2 = 5-25%; 3 = 25-50%; 4 = 50-75% and 5 = >75%.**

*Note: there was a slight re-adjustment to the estimated total cover abundance for autumn 2013.*

Summaries and photographs of each herbaceous planting site are provided in the following sections. Bracketed numbers in the centre column provide results from the previous (spring 2013) monitoring period.

**3.3.1 Monitoring Site HP1 (Sequence 2)**

<b>Jurisdiction</b>	<b>ACT</b>	<b>HP1</b> is located about 750 m from the LLPS within the Murrumbidgee River corridor.  <i>Note:</i> Problem poor soil condition. Broad-leaf weeds: <i>Conyza</i> sp., <i>Hypericum perforatum</i> , <i>Plantago lanceolata</i> , <i>Verbascum thapsis</i> and <i>Verbena bonariensis</i> .
Co-ordinates	691706 – 6060396	
<b>No. of native herbaceous species</b>	<b>16</b> (10)	
Planted	<b>9</b> (7)	
Non-planted	<b>8</b> (3)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25%</b> (5-25%)	
Non-planted	<b>&lt;5%</b> (<5%)	

**Plate 13: Monitoring Site HP1. Image on left spring 2013 and right autumn 2014.**

## 3.3.2 Monitoring Site HP2 (4)

<b>Jurisdiction</b>	<b>ACT</b>	<b>HP2</b> is located about 1,300 m from the LLPS within the ACT.
Co-ordinates	692219 – 6060594	
<b>No. of native herbaceous species</b>	<b>22 (22)</b>	<i>Note:</i> The NSW threatened Silky Swainson-pea <i>Swainsona sericea</i> was recorded within monitoring site. Mid-autumn growth of <i>Eryngium ovinum</i> , which typically exhibits early spring emergence, possibly due to above average minimum temperatures for April and no reported frosts.
Planted	<b>9 (8)</b>	
Non-planted	<b>13 (14)</b>	Problem weeds: Fleabane <i>Conyza</i> sp., perennial and annual exotic grasses.
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25% (5-25%)</b>	
Non-planted	<b>5-25% (5-25%)</b>	

Plate 14: Monitoring Site HP2. Image on left spring 2013 and right autumn 2014.

### 3.3.3 Monitoring Site HP3 (6)

<b>Jurisdiction</b>	<b>ACT</b>	<p><b>HP3</b> is located about 1,550 m from the LLPS within the ACT. Exotic grasses <i>Bromus</i> sp., <i>Lolium</i>, <i>Vulpia</i> and broadleaf weeds i.e. <i>Conyza</i> sp. have combined to dominate the site to the near elimination of some native grasses i.e. <i>Microlaena</i>.</p> <p><b>NOTE:</b> the overall recovery in the ACT section is poor. Dominant exotic grasses and a variety of broadleaf weeds are persistent. Poor top soil is part of the problem.</p>
Co-ordinates	692459 – 6060660	
<b>No. of native herbaceous species</b>	<b>15</b> (18)	
Planted	<b>7</b> (7)	
Non-planted	<b>8</b> (11)	
<b>Estimated cumulative cover score</b>

## 3.3.4 Monitoring Site HP4 (8)

<b>Jurisdiction</b>	<b>ACT</b>	<b>HP4</b> is located about 1,770 m from the LLPS within the ACT.
Co-ordinates	692797 – 6060687	
<b>No. of native herbaceous species</b>	<b>12 (22)</b>	<i>Note:</i> Exotic perennial and annual grasses: <i>Lolium</i> sp., <i>Vulpia</i> sp., <i>Bromus</i> sp., and broadleaf weeds: <i>Conyza</i> sp., <i>Verbena bonariensis</i> and <i>Hypericum perforatum</i> .
Planted	<b>6 (9)</b>	
Non-planted	<b>6 (13)</b>	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25% (&lt;5%)</b>	
Non-planted	<b>&lt;5% (&lt;5%)</b>	

Plate 16: Monitoring Site HP4. Image on left spring 2013 and right autumn 2014.

## 3.3.5 Monitoring Site HP5 (10)

<b>Jurisdiction</b>	<b>ACT</b>	<b>HP5</b> is located about 2,550 m from the LLPS within the ACT, W of the Monaro Hwy. Problem weeds, <i>Plantago lanceolata</i> , <i>Conyza sp.</i> and <i>Cirsium vulgare</i> .  <i>Note: Chrysocephalum apiculatum</i> has progressively declined over consecutive monitoring periods and is now absent from the sample site.
Co-ordinates	693442 – 6060534	
<b>No. of native herbaceous species</b>	<b>16</b> (14)	
Planted	<b>7</b> (8)	
Non-planted	<b>9</b> (6)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25%</b> (<5%)	
Non-planted	<b>&lt;5%</b> (<5%)	

Plate 17: Monitoring Site HP5. Image on left spring 2013 and right autumn 2014.

## 3.3.6 Monitoring Site HP6 (12)

<b>Jurisdiction</b>	<b>ACT</b>	<b>HP6</b> is located about 2,780 m from the LLPS within the ACT, between the Monaro Hwy and Cooma-Goulburn Railway corridor.  <i>Note:</i> Pasture grasses eg. <i>Lolium sp.</i> , <i>Paspalum dilatatum</i> , <i>Phalaris</i> and occasional <i>Eragrostis curvula</i> and broadleaf weeds <i>Plantago lanceolata</i> <i>Conyza sp.</i> , <i>Hypericum perforatum</i> and <i>Eragrostis curvula</i> .
Co-ordinates	693683 – 6060542	
<b>No. of native herbaceous species</b>	<b>13</b> (11)	
Planted	<b>9</b> (8)	
Non-planted	<b>4</b> (3)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25%</b> (5-25%)	
Non-planted	<b>&lt;5%</b> (<5%)	

Plate 18: Monitoring Site HP6. Image on left spring 2013 and right autumn 2014.

## 3.3.7 Monitoring Site HP7 (14)

<b>Jurisdiction</b>	<b>NSW</b>	<b>HP7</b> is located about 3,200 m from the LLPS within the Smith property, NSW.  <i>Note:</i> Problem weeds: include <i>Hypochaeris radicata</i> . <i>Conyza</i> sp., Bare ground 40-50%.
Co-ordinates	694084 – 6060511	
<b>No. of native herbaceous species</b>	<b>15</b> (14)	
Planted	<b>10</b> (8)	
Non-planted	<b>5</b> (6)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25%</b> (5-25%)	
Non-planted	<b>&lt;5%</b> (<5%)	

Plate 19: Monitoring Site HP7. Image on left spring 2013 and right autumn 2014.

### 3.3.8 Monitoring Site HP8 (15)

<b>Jurisdiction</b>	<b>NSW</b>	<b>HP8</b> is located about 3,650 m from the LLPS within the McDonald property, NSW.  <i>Note:</i> Northern half of sample site was dominated by annual exotic grasses <i>Bromus</i> sp. and <i>Vulpia</i> sp. and broadleaf weeds <i>Conyza</i> sp. and <i>Cirsium vulgare</i> . Southern half retains components of the original groundcover and fewer weeds.
Co-ordinates	694525 – 6060591	
<b>No. of native herbaceous species</b>	<b>22</b> (31)	
Planted	<b>8</b> (10)	
Non-planted	<b>14</b> (21)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25%</b> (5-25%)	
Non-planted	<b>5-25%</b> (5-25%)	

Plate 20: Monitoring Site HP8. Image on left spring 2013 and right autumn 2014.

## 3.3.9 Monitoring Site HP9 (16)

<b>Jurisdiction</b>	<b>NSW</b>	<b>HP9</b> is located about 4,050 m from the LLPS within the McDonald property, NSW.  <i>Note:</i> Problem weeds include <i>Conyza</i> sp., <i>Hypochaeris radicata</i> and <i>Cirsium vulgare</i> . <i>Bromus</i> sp. and <i>Vulpia</i> sp. are the dominant exotic grasses with low incidence of <i>Eragrostis curvula</i> .
Co-ordinates	694890 – 6060767	
<b>No. of native herbaceous species</b>	<b>16</b> (19)	
Planted	<b>9</b> (10)	
Non-planted	<b>7</b> (9)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25%</b> (5-25%)	
Non-planted	<b>&lt;5%</b> (<5%)

## 3.3.10 Monitoring Site HP10 (17)

<b>Jurisdiction</b>	<b>NSW</b>	<b>HP10</b> is located about 4,475 m from the LLPS within the McDonald property, NSW.  <i>Note:</i> Problem weeds include <i>Bromus</i> sp. and <i>Vulpia</i> sp., which are the dominant grasses and lesser amounts of <i>Phalaris aquatica</i> and <i>Paspalum dilatum</i> .
Co-ordinates	695248 – 6060569	
<b>No. of native herbaceous species</b>	<b>24</b> (16)	
Planted	<b>10</b> (9)	
Non-planted	<b>14</b> (7)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25%</b> (5-25%)	
Non-planted	<b>5-25%</b> (<5%)	

Plate 22: Monitoring Site HP10. Image on left spring 2013 and right autumn 2014.

## 3.3.11 Monitoring Site HP11 (20)

<b>Jurisdiction</b>	<b>NSW</b>	<b>HP11</b> is located about 6,175 m from the LLPS within the Codd/Howarth property, NSW.  <i>Note:</i> Problem weeds <i>Phalaris aquatica</i> , <i>Conyza sp.</i> and <i>Plantago lanceolata</i> .
Co-ordinates	696826 – 6060127	
<b>No. of native herbaceous species</b>	<b>16 (13)</b>	
Planted	8 (8)	
Non-planted	8 (5)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25% (5-25%)</b>	
Non-planted	<b>&lt;5% (&lt;5%)</b>	

Plate 23: Monitoring Site HP11. Image on left spring 2013 and right autumn 2014.

## 3.3.12 Monitoring Site HP12 (22)

<b>Jurisdiction</b>	<b>NSW</b>	<b>HP12</b> is located about 7,550 m from the LLPS within the Devitt property, NSW.  <i>Note:</i> Problem weeds <i>Phalaris aquatica</i> , <i>Bromus</i> sp., <i>Paspalum dilatatum</i> , <i>Dactylis glomerata</i> , <i>Plantago lanceolata</i> and <i>Hypochaeris radicata</i> .
Co-ordinates	698003 – 6060755	
<b>No. of native herbaceous species</b>	<b>20 (20)</b>	
Planted	7 (8)	
Non-planted	13 (12)	
<b>Estimated cumulative cover score</b>		
Planted	<b>5-25% (5-25%)</b>	
Non-planted	<b>&lt;5% (&lt;5%)</b>	

Plate 24: Monitoring Site HP12. Image on left spring 2013 and right autumn 2014.

## 3.3.13 Monitoring Site HP13 (23)

<b>Jurisdiction</b>	<b>NSW</b>	<b>HP13</b> is located about 8,250 m from the LLPS within the Boss property, NSW.  <i>Note:</i> Native groundcover has declined and revegetation is poor. Most of the planted tubestock appears no longer viable. Pasture grasses, <i>Dactylis glomerata</i> , <i>Paspalum dilataum</i> , <i>Lolium perenne</i> are dominant along edges of drainage line.  Requires replanting.
Co-ordinates	698541 – 6061210	
<b>No. of native herbaceous species</b>	<b>10</b> (10)	
Planted	<b>8</b> (9)	
Non-planted	<b>2</b> (1)	
<b>Estimated cumulative cover score</b>		
Planted	<b>&lt;5%</b> (<5%)	
Non-planted	<b>&lt;5%</b> (<5%)	

Plate 25: Monitoring Site HP13. Image on left spring 2013 and right autumn 2014.

### 3.4 Weeds

Broad-leaf weeds (i.e. Fleabane *Conyza* sp., St John's Wort *Hypericum perforatum*, Viper's Bugloss *Echium vulgare* and Purple-top *Verbena bonariensis*) and a variety of annual and perennial exotic grasses (i.e. *Bromus* sp., *Lolium* sp., *Vulpia* sp., and *Paspalum dilatatum*) were widely encountered within former Box Gum Grassy Woodland components of the construction corridor, with heavy infestations observed in the ACT, central and eastern portions of the McDonald property and western portion of the Lonergan property.

Substantial infestations of African Lovegrass (ALG) *Eragrostis curvula* occur either side of the Monaro Highway and continue to be a source of reinfestation into surrounding areas, including the construction corridor. Smaller infestations occur at HP6 and near TSP5 within the ACT and HP9 within the McDonald property and within HP13 on the Bos property.

St John's Wort *Hypericum perforatum* was widespread within the construction corridor and was most abundant at HP1, HP4, HP6 in the ACT and HP7 in NSW.

Minor outbreaks of Spear Thistle *Cirsium vulgare*, Blackberry *Rubus* sp. and Briar Rose *Rosa rubiginosa* persisted in low densities at HP1, HP3, HP5 in the ACT and HP8, HP9, HP10, HP11, HP12 and HP13 in NSW.

### 3.5 Threatened plants

Silky Swainson-pea *Swainsona sericea* occurred at HP2 (ACT section) and in the central portion of the McDonald property west and east of the gate complex.

### 3.6 Threatened fauna

Previous observations of Diamond Firetail *Stagonopleura guttata* Brown Treecreeper *Climacteris picumnus* and White-winged Triller *Lalage sueurii* were noted in earlier reports.

An additional sighting of a pair of Brown Treecreeper was made within remnant BGGW at the south-western corner of the McDonald property (co-ordinates E693808 - N6060633) on 8 April 2014.

### 3.7 Main Observations

#### Tree and shrub planting

- There was a significant decline in the proportion of specimens that were in good health (down from 64% in Spring 2013 to 49% in autumn 2014).
- There was a significant increase in the number of dead or missing tree and shrub plantings, which was most pronounced in the ACT section of the construction corridor.
- The proportion of specimens that were in poor health, dead or missing rose by 15.5% from 35% in spring 2013 to 51% in autumn 2014.

#### Herbaceous planting

- Twelve of nineteen planted species were recorded.
- Planted species averaged 8.2 sp. per sample site (7.6 sp. in spring 2013), about half the number planted.
- There was a small increase in the estimated total cover abundance of planted species compared with the previous spring 2013 monitoring period.

### 3.8 Key Performance Targets

The *planting* monitoring procedure was implemented after the *plot* (seeding) monitoring, when the KPTs were established, and thus, the KPTs do not provide an effective tool with which to measure herbaceous planting success (see **Section 2.3**, above). The performance target stipulates (see extracts below) a minimum 70% cover abundance threshold for sown (seeded) vegetation, however, the targets are inconsistent and not well articulated with respect to planting targets.

The following extracts from LRMP and EMP, exemplify this lack of coherence.

*'Ground Cover - >70% of vegetation cover of the native species sown and survival of native ground and tree species.' and 'Native species (planting success) - all species listed for seeding and planting are present.'* (from Table 8.1 in the LRMP, Jan 2012); and further,

*'Ground Cover - >70% of vegetation sown or planted within the construction project.' ...and....'Native species (vegetation composition and abundance) – all species listed for seeding and planting are evident and other native species are migrating into woodland areas.....'* which is followed by comments for the **'Operation easement'**.....*'Ground Cover - >70% of vegetation cover of the native species sown.'* (from Table 6.4 in the EMP, Sept 2010).

Furthermore, attempts to measure the success of planted herbaceous tube stock were confounded by increasing groundcover heterogeneity and mixing of congeners from other sources, such as seeding rehabilitation and soil-seed stock, thus, reducing the value of the assessment.

On this basis, there is little purpose continuing with monitoring herbaceous plantings and it should be discontinued. The performance of groundcover rehabilitation could be based solely on the outcomes of plot monitoring, which evaluate all species regardless of origin. Tree and shrub monitoring, on the other hand, should continue albeit under clear performance guidelines.

### 3.9 Suggested Actions

- Continue with routine weed control measures, however, care should be taken to minimise non-target species impacts, i.e. no broad spraying applications unless absolutely necessary.
- Engage with ACT Government Territory and Municipal Services to reduce significant African Lovegrass *Eragrostis curvula* infestations within the Monaro Hwy and railway corridors.
- Crash grazing was undertaken in the central and eastern paddocks of the McDonald property during late summer/early autumn 2014 to reduce bio-mass and control invading broad-leaf weeds such as Fleabane *Conyza* sp. Recurrent seasonal 'crash' grazing may be required to maintain broad-leaf weeds levels.
- Given the low survival rate for tree and shrub planting (only 49% success) supplementary planting in areas of native vegetation and high conservation woodland will be required (see *'Actions (if KPTs not met)'* in Table 6.4 of the Ecological Monitoring Sub-plan, Sept 2010).
- The KPTs for the planting component should be reviewed. The KPT for trees and shrubs needs clarification. We would recommend a target of 70% success rate.
- Monitoring of herbaceous plantings should be discontinued.

## 4 Conclusion

Monitoring surveys were conducted between 2 and 8 April 2014 to measure the performance of rehabilitation plantings within the M2G construction corridor and structure sites.

Quantitative sampling methods were applied to woody plantings and a modified quantitative approach, based on species presence and cover abundance, was used for herbaceous plantings.

### ***Tree and Shrub Monitoring***

About 14% (700 specimens) of the all tree and shrub plantings were monitored at twelve sample sites. Of these, 343 (49%) were in good health, 82 (11.7%) were in poor health and 275 (39.3%) were dead or missing. This represented a 15% decline in the number of specimens in good health compared to the previous monitoring period.

*Extensive supplementary tree and shrub planting will be required to meet an adequate level of success, and particularly in the ACT section of the construction corridor.*

### ***Herbaceous Monitoring***

A total of 46 native herbaceous species were recorded, which comprised 12 planted species (from a total of 19 sp.) and 34 non-planted native species. Although there was a small decline in the number of planted species compared to previous sampling there was a greater number of species with cover scores of 1 (<5% cover) and a small increase in total cover abundance, which remained near but below 25%.

*It has been recommended that herbaceous planting monitoring be discontinued and that groundcover rehabilitation be determined through the plot monitoring procedure.*

## Appendix 3: Floristic data – herbaceous plantings

**Table 8: Herbaceous planting data from thirteen sample sites (HP1 - HP13) from spring 2102 to autumn 2014. Planted species are shown in bold type.**

Cover abundance scores for recorded native species based on a modified Braun Blanquet scale, as follows:

- r = < 5% cover and solitary (< 4 individuals)
- + = < 5% cover and few (4-15 individuals)
- 1 = < 5% cover and numerous/scattered (>15 individuals)
- 2 = 5% - 25% cover
- 3 = 25% - 50% cover
- 4 = 50% - 75% cover
- 5 = > 75% cover
